

# In Vitro Fertilization With donor eggs and donor sperm

**1 First Visit** → 2h

## Diagnosis and start of treatment

We confirm the treatment and you may even start the same day.

**A Endometrial preparation** to favor the pre-embryo's implantation.

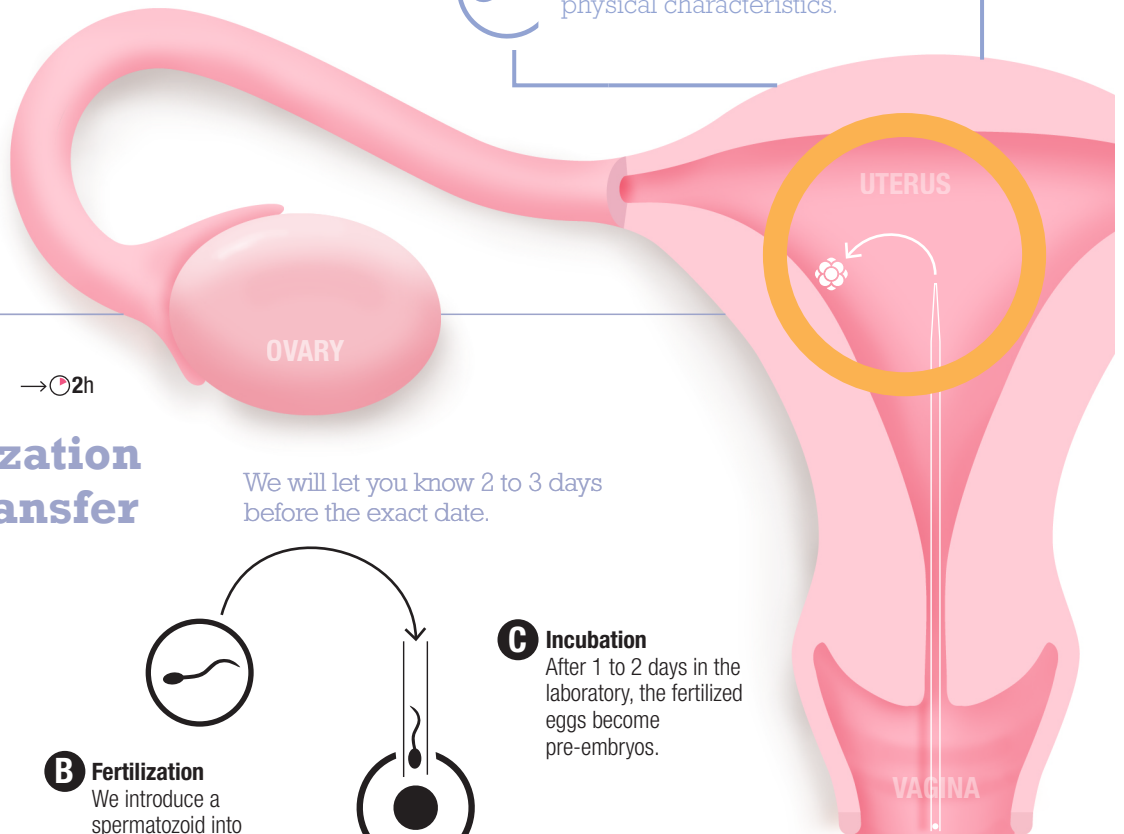

### Anonymous donors

They are carefully selected to discard pathologies and ensure a further match with your physical characteristics.

15-30 days

The treatment is done at home

**2 Segunda Visita** → 2h

## Fertilization and transfer

We will let you know 2 to 3 days before the exact date.

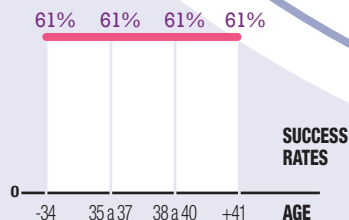

**B Fertilization**  
We introduce a spermatozoid into the egg with a microscopic needle.

**C Incubation**  
After 1 to 2 days in the laboratory, the fertilized eggs become pre-embryos.

**D Transfer**  
We select 1 or 2 pre-embryos; we load them into a fine catheter and introduce them in the uterus.

### ¿When do we recommend this treatment?

- When there are problems in the ovaries, or due to age or unknown reasons.
- Sperm anomalies: absence, low concentration or mobility of spermatozoids.
- Single women without a male partner.

In less than **1 month** you can be pregnant
