

Artificial Insemination With donor sperm

1 First Visit → 02h

Diagnosis and start of treatment

We confirm the treatment and you may even start the same day.

A Stimulation

The ovaries are stimulated with hormones so follicles can be produced.

B Control

Through ultrasounds we can control that the size and quantity of each follicle is adequate.

C Egg release

Through the intake of another hormone we trigger the egg release.

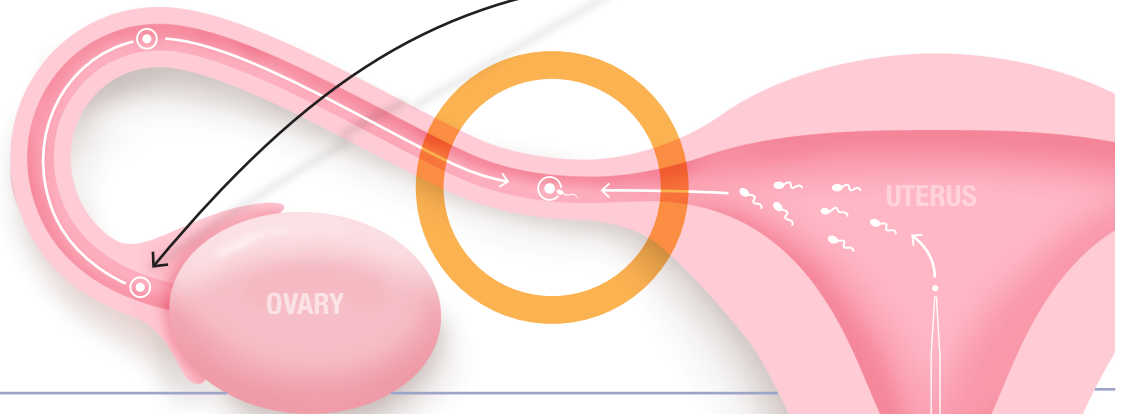

15 days

days

The treatment is done at home

2 Second Visit → 02h

Insemination

We will let you know 2 to 3 days before the insemination of the exact date.

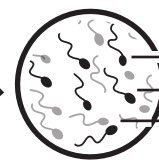

D Donor

The sperm sample is obtained from a donor who has carried out a complete medical study.

E Selection

We select the spermatozoids and prepare the sample.

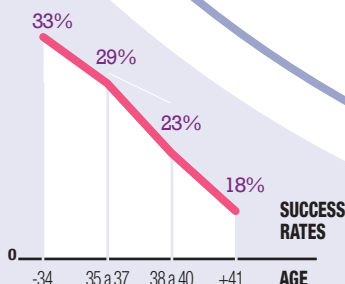

F Insemination

We load the sample into a cannula and insert it in the uterus.

¿When do we recommend this treatment?

- Male Hereditary illnesses.
- Inability of the testicles to produce spermatozoids.
- Single women without a male partner.

In less than

1 month
you can be pregnant
